

Field Erection Capabilities & Services

Smith & Loveless can provide any level of field-erection support — from simple consultation to supervisory roles, or to a total turnkey field installation.

Smith & Loveless is no stranger to building on-site. With more than 500 field-erection installations to its credit, Smith & Loveless knows how to get the job done right — at the right price.

Smith & Loveless' field subcontractors are proven, skilled technicians, familiar with the intricacies of Smith & Loveless equipment. They also are experienced in working with other contractors at the same site. This level of expertise translates into minimal installation problems and on-time project completion. Additionally, field-erection saves money in the form of shipping expenses.

(Pictures above) At this field-erection site, Smith & Loveless coordinated its work with other contractors and crews on-site. They all meet their critical deadline—complete field-erection, installation and start-up in less than three months.

Customize For Your Needs

Each project has unique requirements. Smith & Loveless has three service packages it can provide to help its customers meet their needs. Customers can select one package or a combination of all three:

Supervisory Package

Smith & Loveless personnel can provide supervisors to coordinate the work of subcontractors whom you choose — ideal for areas in which minimal field assembly work is required or overseas.

Field-Installation Services Package

Smith & Loveless can provide trained supervisors and experienced work crews for total field-installation. Reliable, proven technicians perform Smith & Loveless field installation services.

Start-Up Package

Smith & Loveless personnel can assist with system start-up procedures once the unit is installed. No one knows system better than Smith & Loveless. Rely on Smith & Loveless' trained staff for quality field-erection, installation and startup.
