

Pretreat or Polish Your Process Water with FIBROTEX®

FIBROTEX® is a unique backwashable fine filter that can be used with/without cartridge filters or to replace costly media/sand filters and reduce operating costs.

If your process water needs to be free from turbidity, iron, manganese or colour, protect your system by pre-treating your process water with a FIBROTEX® filter.

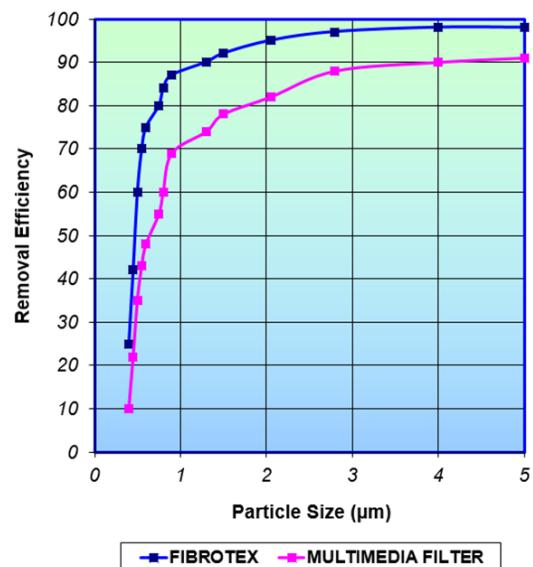

If your process water requires polishing, FIBROTEX® will provide a better quality filtration prior to recycling or discharge.

Features & Benefits

- Removes up to 98% particles in the feedstream down to 2 micron
- Low backwash volumes, requiring 80% less backwash water than multimedia filters without the use of flocculants
- Small footprint - modular
- Fully automatic
- Low maintenance cost
- Robust, reliable, longer lifespan
- Optimises the performance of downstream UV systems

FIBROTEX® vs Traditional Technology
